PROFESSIONAL SUMMARY

Data Engineer with hands-on experience in building scalable **ETL/ELT** pipelines using **Python, SQL, PySpark, Databricks, Apache Airflow,** and **Kafka**. Experienced in developing data ingestion workflows, real-time streaming applications, data migration.

PROFESSIONAL EXPERIENCE

Data Engineer 01/2026 – Present
Spanidea System Pvt. Ltd. Jodhpur, Rajasthan
- Developed Python-based data transformation workflows to convert raw device telemetry into standardized JSON payloads for downstream data processing.
- Led end-to-end migration of 60+ MySQL tables, developing stored procedures, trigger-based automation, data validation frameworks, and schema mapping solutions while ensuring data integrity and successful production-scale testing.
- Developed an end-to-end AI-powered resume matching pipeline using Databricks, PySpark, Delta Lake, and Medallion Architecture, integrating model for candidate matching, scheduled Lakeflow Jobs, automated retries, Quarantine Tables, failure alerts, and unmatched candidate notifications.
- Analyzed InfluxDB time-series data using Flux queries and aggregations to investigate device reporting frequency across minute, hour, and day-level intervals, extracting and examining telemetry patterns to support route and vehicle-distance analysis.

Software Developer (Freelance) – Backend 01/2026 – 02/2026
Freelance Remote
- Developed RESTful APIs for a production-grade Admin Panel backend.
- Integrated backend services with a decoupled frontend for secure data flow.
- Implemented JWT-based authentication and optimized SQL queries.

Intern 06/2025 – 07/2025
Beyond Marketing Jodhpur, Rajasthan
- Solely designed and developed Mediitrack, a production-grade medical mobile app, from scratch using React Native (Expo) and TSX.
- Translated high-fidelity design mockups into performant, reusable components, ensuring pixel-perfect implementation and responsive layout across different devices.

Intern 06/2024 – 07/2024
Defence Research and Development Organisation (DRDO) Jodhpur, Rajasthan
- Designed an intuitive Python/Tkinter UI, reducing user input steps.
- Integrated five advanced filters, boosting processing efficiency.

PROJECTS

Retail Lakehouse Data Pipeline
- Designed and implemented an end-to-end retail data pipeline on **Databricks** using the **Medallion Architecture** (Bronze, Silver, and Gold).
- Built **ETL** workflows with **PySpark** to ingest, clean, transform, and aggregate retail sales data into analytics-ready datasets.

Real-Time ETL News Pipeline
- Developed an automated News **ETL** pipeline using **Apache Airflow** and real-time news data from external APIs.
- Implemented **Redis** caching and **MySQL** data warehousing to optimize data processing and storage efficiency.
- Containerized the complete pipeline using **Docker**, enabling scalable orchestration, task scheduling, and seamless deployment.

Real-Time E-Commerce Analytics Platform
- Built a real-time e-commerce analytics pipeline using **Kafka**, **PySpark** Structured Streaming, **MySQL**, and **Grafana** for live order processing and business insights.
- Developed streaming **ETL** workflows to ingest, enrich, and transform transaction data, including real-time revenue calculations.

TECHNICAL SKILLS

Programming Languages
Python, SQL, JavaScript, TypeScript

Big Data & Processing
Databricks, PySpark, Apache Kafka, Apache Airflow, Hadoop

Databases
MySQL, MongoDB, InfluxDB

Data Analysis & Visualization
Pandas, NumPy, Grafana

Version Control & DevOps
Git, GitHub, Docker, Linux

Mobile App Development
React Native(Expo)

Frontend Frameworks
React.js, Tailwind CSS, HTML, CSS

Backend & Platform
Node.js, Express.js

EDUCATION

Bachelors of Electronics and Computer Engineering 2022 – 2026
MBM University Jodhpur, Rajasthan
- Aggregate GPA: 8.19

CERTIFICATES

- Databricks Certified Data Engineer Associate
